    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

                                                                                                                                                                                                      SUBMITTED (NOV-1999) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).

-i- SUBGUIT: INTERACTS WITH GIVOGEN SYNTHASE KINASE-3 BETA (GSK-3B) AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN.

TERNARY COMPLEX (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- PIM: PROBABLY PHOSPHORYLATED BY GSK-3B AND DEPHOSPHORYLATED RY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AXN2_MOUSE STANDARD; PRT; 840 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Local Similarity
                                                                                                                                               FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES BETA-CATERIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).

SUBUNIT: INTERACTS WITH GSK-3B AND BETA-CATENIN. THE INTERACTION BETW-EEN AXIN AND BETA-CATENIN OCCURS VIA THE ANWADILLO REPEATS CONTAINED IN BETA-CATENIN. TERNARY COMPLEX. ALSO BINDS TO PLAKOGLOBIN (GAMMA-CATENIN), APC, DVL AND PPZA (BY SIMILARITY).

SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN TESTIS, THYMUS AND LUNG FOLLOWED BY CEREBERUM, CEREBELLUM, HEART, KIDNEY, SKELETAL MUSCLE, SPLEEN AND LIVER.

DOMAIN: CONTAINS A HOMO B DOMAIN, ALSO KNOWN AS P OR MIDDLE DOMAIN

AND A SUBTILISIN-LIKE CATALYTIC DOMAIN. ESSENTIAL DOMAINS FOR

CATALYTIC ACTIVITY.

DOMAIN: CONTAINS A CYTOPLASMIC DOMAIN RESPONSIBLE FOR ITS TGN

LOCALIZATION AND RECYCLING FROM THE CELL SURFACE.

PMM: THE PROPERFIDE IS AUTOCATALYTICALLY REMOVED THROUGH AN

INTRAMOLECULAR CLEAVAGE PROBABLY IN THE ENDOPLASMIC RETICULUM

(ER). IN THE TGN THE SECOND CLEAVAGE IN THE PROPEPTIDE COULD LEAD

TO THE ACTIVATION OF FURIN.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY SB; ALSO KNOWN AS THE

SUBTILASE FAMILY. HIGH SIMILARITY WITH OTHER FURIN-LIKE ENZYMES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TRANS GOLGI NETWORK. PROPEPTIDE CLEAVAGE IS A PREREQUISITE FOR EXIT OF FURLN MOLECULES OUT OF THE ENDOPLASHIC RETICULUM (ER). SECOND CLEAVAGE IN THE PROPEPTIDE OCCUR IN THE TRANS GOLGI NETWORK (TGN), WHICH IS FOLLOWED BY THE RELEASE OF THE PROPEPTIDE BOUND TO FURIN AND THE ACTIVATION OF FURIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESPECTIVE PRECURSORS.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
